

WELCOME TO DIAGRAPH UNIVERSITY

The real world
RFID school where you
can learn everything
you need to know about
Radio Frequency ID
and test your
own application.

DIAGRAPH UNIVERSITY...WHERE RFID IS TAKING SHAPE.

Because Diagraph is an authority on automatic identification systems, and our customers have a vital interest in the emerging field of RFID, we want to share our expertise.

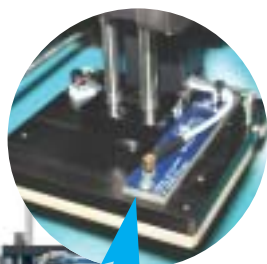

That's the idea behind "Diagraph U." We're ready to conduct a special workshop, just for your company, at our St. Louis Training Center and Application Lab.

Here's what you'll learn about RFID:

- History & Benefits
- Theory of Operation
- Compliance Standards
- Hardware/Software/Label Options
- Implementation Solutions
- Equipment Selection
- Testing your Application

LEARN ABOUT NEW DIAGRAPH RFID SOLUTIONS

Diagraph's Patent-Pending
RFID TampTenna™

TampTenna™ is Diagraph's unique, patent-pending product that can program and verify any Class 1 RFID tag.

- Erases, programs, verifies 96-bit tags in 200 mS

Due to TampTenna's technology, Diagraph's PA/5000LT system can print, program, apply and re-verify upon application of label—all at speeds up to 50 ppm with 4" x 6" smart labels.

Diagraph's RFID solution can also include a heavy-duty reject plate that intercepts bad tags before they can be applied. Every good tag is re-verified on the product while the tamp pad retracts, without the need for additional antennas, mounts or readers, thus saving money and production line space.
