

Frames

CUSTOM FRAME DESIGN

If a standard frame assembly does not meet your specific application requirements, we are able to offer custom design and manufacturing services using the latest in 3D modeling software.

Service

We pride ourselves on superior sales & service. Our Help Desk Technicians are available via phone, e-mail, and online chat. Our factory-trained technicians have remote access to all documentation and drawings.

ON-SITE SERVICE AND REPAIRS

A nationwide network of field-based service managers and technicians are employed by us, factory trained, and cover coast-to-coast. Dedicated company vans are equipped with the right tools and parts inventory. Geolocation software allows for locating and dispatching of technicians to

customer sites in real time.

- On-site Field Service technicians are trained to perform a multitude of tasks
- Perform site surveys to review best-fit technology for applications prior to customer purchasing
 - Install equipment to factory specification
 - Enable on-site warranty in addition to factory equipment warranty
 - Courtesy calls to make sure equipment is running as it should
 - Troubleshoot equipment to factory specifications
 - Repair defective equipment on an as needed basis
 - Check parts and consumables inventory at customer's site
 - Perform scheduled maintenance to keep your equipment running efficiently and reliably
 - Operator and maintenance training ensure those that use and maintain the equipment are in the know
 - Written summary of the work that was performed so that you know exactly what was done and any next steps needed

IN-HOUSE SERVICING

In addition to on-site calls we offer in-house repairs at our facility. The equipment is fully serviced and subjected to the same rigorous test procedures as all of our products. On request, loaner equipment can be provided in order to help alleviate the pressure on production while your equipment is being serviced. In addition we will perform scheduled maintenance to keep your equipment running efficiently and reliably.

CUSTOMER TRAINING

Training is available at our facility or yours. It is custom designed for your specific products and all operators and maintenance staff can be trained on multiple shifts. Attendees receive in depth training as well as manuals and tools to be certified technicians of our products. Operators are then able to identify and repair mechanical and electrical problems independently.

we mark your products.

Our XL-printer series is designed to mark your products around the world, courtesy of the dedicated Unicode font printing capability.

Design simplicity and robust construction help us meet the requirements of your industrial coding application.

Different control unit options allow us to match your needs, whether you prefer to specify a user friendly handset, or control the printer from the comfort of your office via your PC.

Our systems can print a wide variety of information: bar codes, text, graphics, real-time and dynamic date coding, and with a ribbon capacity of up to 1950 feet (600m), downtime for consumables is minimal.

Network and Software Solutions

We offer software solutions for printer control and print image design for most coding applications. If you need a custom software solution, please contact us.

DESIGN-SOFTWARE

Our label design software has no limitations related to product marking and network requirements.

Films

Norwood's thermal transfer ribbons have been specifically developed for thermal transfer printers and produce high quality images, even in high-speed printing. Different combinations of waxes and resins, the composition of which is coordinated with the respective material to be printed on, are used to produce print images with a high scratch-resilience and durability in every application. Custom colors are available.

Our expert team will find the perfect solution for your specific application. Extensive market experience in the coding industry enables us to offer you many different products and services from a single source.
