

# CIJ printer offers versatility to mark on a variety of products making it easy for contract packagers

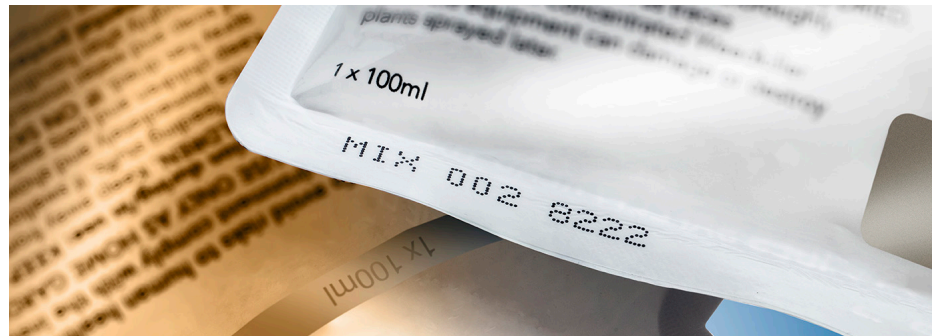

## OVERVIEW

The exceptional versatility and user-friendliness of a Linx small character continuous inkjet (CIJ) printer is delivering increased efficiency and convenience for a British contract packager.

At the UK factory, the Linx 8900 series CIJ printer is moved around depending on where it is needed. Its outstanding versatility, combined with Linx black 1240 fast-drying ink, which is suitable for a wide range of coding applications, enables the printer to code in different positions onto a variety of pack formats including pouches, cartons, tubes and buckets.

Line speeds vary from five to fifty packs per minute, and the printer can produce codes of text, numbers, barcodes and logos, adding to its flexibility.

Further benefits that enable the contract packager to maximize uptime include the Linx CIJ's simple self-maintenance with extended periods of time between services, its quick-change fluid cartridges, which allow minimal disruption to the line; and its simple smartphone-inspired screen, which makes operation faster than ever.

## Project Overview

Industry:	Contract packaging
Problem:	Needed a versatile coding solution for all its different products
Technology Solution:	Linx 8900 CIJ printer
Results:	Customer experiences a more fluid system with the ability to work with various types of packaging

“The Linx CIJ printer is the perfect coder for us. Its ability to float around the factory, moving to wherever it is needed, is absolutely priceless – as is its capacity to work with so many different type of packaging.”

- Operations Manager
