DUK 3:   True Type Fonts Converted for Impulse Jet
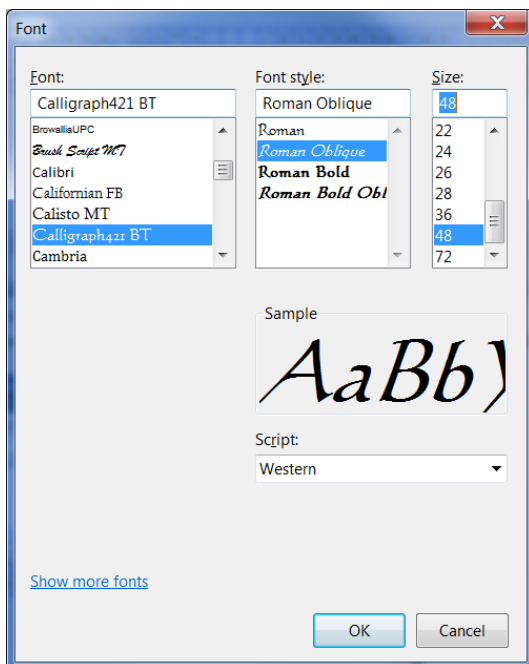

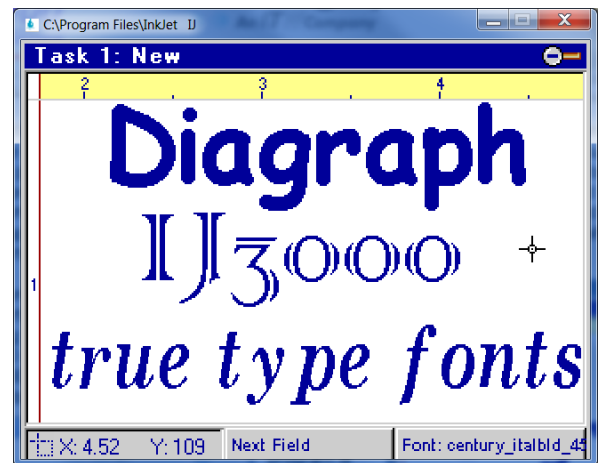

Did you know that a font conversion program is now included in IJ3000 software for converting True Type Fonts to use with Impulse Jet systems? True Type Fonts are typically requested by customers for use in promoting brand consciousness or for display packaging. Custom fonts for the IJ3000 were previously made available to customers for a nominal fee with an extended lead time. The font conversion program automates, simplifies and shortens the process and is now a standard capability included in the IJ3000 PC software. This makes the wide list of TTF's available for easy conversion to the style and size font desired for immediate use.

The font converter program runs on a PC and is included as part of the normal IJ Demo Software installation process. The program is simple, easy to use and includes instructions. The program will convert all True Type fonts available on the PC it is installed to.   The user selects the desired font from the available list of TTF's and specifies the size. A name is entered for the converted font. The font is created. It's that simple.

Converted TTFs are automatically placed in the proper program folder for use by the IJ3000 PC demo software. When the IJ3000 demo software is run the newly converted font(s) appear in the font selection list and are available for use as are any pre-installed fonts on the IJ3000 PC software. Fonts can be transferred from the PC to the IJ3000 controller via Ethernet or USB thumb drive to be used with the impulse jet system.

Availability of True Type Fonts is one more reason that Diagraphs' Impulse Jet product line is the best value choice!
