

Wire & cable manufacturer improves efficiencies with Linx 8940 Spectrum CIJ printer

INTRODUCTION

A manufacturer and supplier required pigmented inks to mark unique job numbers onto cables and wire assemblies. Production schedules varied from 2 hours to 10 hours depending on the job, with print head cleaning required two to three times each day on their older machines.

PROBLEM

The manufacturer was experiencing high maintenance with their white ink printer due to ink build-up and required an easier-to-use and more efficient solution.

SOLUTION

After installing the Linx 8940 Spectrum with white ink, the manufacturer noticed a considerable reduction in cleaning and greater efficiencies. The print head does not require daily cleaning and the interface is easier to use due to the touchscreen, making code set up fast. The printers ease of use and clear print ensures they deliver quality results.

Project Overview

Industry:	Wire & Cable
Problem:	High maintenance on older printers
Technology Solution:	Linx 8940 Spectrum
Results:	More efficiency due to reduced cleaning

“At the end of the day we put it into idle and then first thing in the morning, it’s ready to rock and roll. I can’t fault it. It’s easy to use and you get a clear print, which is just what we want for our customers.”

- Wire Prep Manager
